

Transection

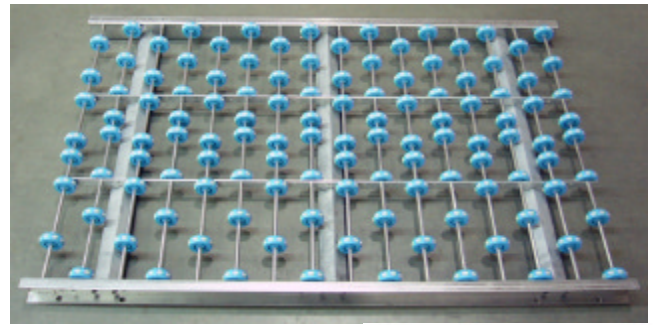

Transections are Transwheel gravity sections that can be substituted for skatewheels in standard skate conveyors to provide convenient ready made work stations, easy side load/unload conveyors, or "ball tables." Transections use 2" Transwheels and are available in six varieties.

Transection Features

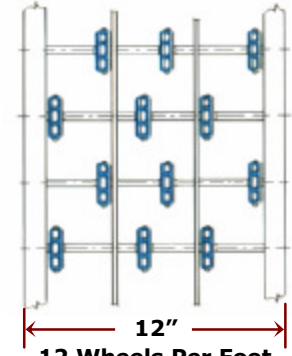

- Completely bolted construction
- Formed 10 gage aluminum or 12 gage enameled steel channel
- Accurately aligned 1/4" diameter steel axles
- Aluminum or zinc plated steel spacers
- Stringers and cross braces of 10 gage aluminum or 12 gage steel
- Self-locking nuts assure positive assembly

Transection Capacities

- Aluminum Frame (distributed load, supports on 10' centers) - 144 lbs.
- Steel Frame (distributed load, supports on 10' centers) - 320 lbs.

Transection Width	Wheels Per Foot
12"	10
12"	12
18"	16
18"	18
24"	20
24"	24
